1 Project Manager

Renting Boats App: Make Boats Booking Easy

Renting Boats is a boats booking service allowing users to search and book various boats for voyage.

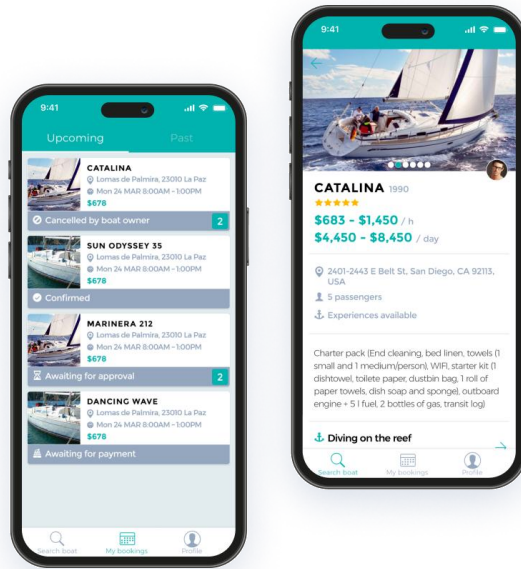

Business challenge

The application is aimed to provide a service of lending and renting of boats (similar to Airbnb). Mobile applications should be development only for users who want to rent a boat. Boat owners and the service admins have a web-based application.

Our solution

Together with the client, we analyzed the business goals and requirements and decided on the scope for MVP version of the application.

We developed a custom design for iOS and Android applications, developed basic functionality and released an MVP version of the application with the featured listed below.

Distinctive features

- ✓ Detailed search for boats
- ✓ Multi Language support (English and Spanish)
- ✓ Users rating
- ✓ Preset email notifications
- ✓ General reports in Admin panel
- ✓ Users management by Admins
- ✓ Extended bookings management in Admin panel

What's now?

The application is being developed and tested.
